U.S. Patent Application Serial No. 10/808,509  
Response to OA dated November 1, 2007

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (Currently Amended): A dial plate in an instrument panel of a vehicle, having a ~~segment display area including indexes~~, consisting of laminated patterns of electrodes and light emitting elements, said laminated patterns being formed on a substrate, ~~composed of glass or a resin~~, of the dial plate for an instrument panel, by laminating electrodes and organic electroluminescent materials through ink jet printing, ~~the dial plate for an instrument panel having the substrate, a first electrode printed directly on the substrate, an emitting layer printed directly on the first electrode, and a second electrode formed directly on the emitting layer, and~~ each of the electrodes and the light emitting elements having a specific design corresponding to ~~external ink jet printing~~ data.

Claim 2 (Canceled)

Claim 3 (Currently Amended): A method for producing a dial plate for an instrument panel of a vehicle, ~~having a segment display area including indexes~~, consisting of the steps of:

receiving ~~external ink jet printing~~ data; and

forming laminated patterns on a substrate of the dial plate for an instrument panel by laminating electrodes and organic electroluminescent materials through ink jet printing, by printing

U.S. Patent Application Serial No. 10/808,509  
Response to OA dated November 1, 2007

~~a first electrode directly on the substrate, an emitting layer directly on the first electrode, and a second electrode directly on the emitting layer,~~

whereby said laminated patterns have a specific design corresponding to the external ink jet printing data.

Claim 4 (Canceled)
